

Daniel Etukudo

Kigali, Rwanda | +250794004835 | danielsamueletukudo@gmail.com | [LinkedIn](#) | [YouTube](#) | [Portfolio](#)

Machine Learning Engineer with over 6 years of experience in developing and deploying AI solutions, focusing on real-time monitoring, computer vision, and LLM-based applications. Skilled in leading teams and delivering transformative AI projects across industries, including healthcare, agriculture, and robotics.

TECHNICAL SKILLS

Machine Learning Frameworks: TensorFlow, Yolo, Mask R-CNN, PyTorch, OpenCV, MediaPipe, Dlib, Keras, Numpy, Pandas, Caffe, Scikit-Learn, supervision, GPT, LLaMA, Hugging Face Models, ElevenLabs, LLM Engineering, SQL, Gemini, Vetex AI, GCP Ecosystem, Cloud-based SaaS, Nginx, Google Workspace, Object tracking with ByteTrack, BoT-SORT and DeepSORT etc.

Programming Languages: Python, C, C++

Backend & Deployment: Docker, Flask, FastAPI, REST APIs, Git, AWS, Google Cloud (GCP)

Business/Strategic: Business Process Optimization, Requirements Gathering, Stakeholder Management, Go-to-Market Strategy, Project Management (PMO).

Technical Ecosystem:

Others: Electronics, Embedded systems, Robotics

PROFESSIONAL EXPERIENCE

Remoting.Work

Oct 2025 - Present

AI Automation Engineer | LLM & Agent Developer | Computer Vision Engineer

- Built AI voice, interview, and proctoring systems using LiveKit, GPT-4o-mini, Deepgram, ElevenLabs, MediaPipe, and OpenCV, delivering real-time conversations, face detection, gaze tracking, and automated assessments.
- Created an LLM-based interview evaluation system that automatically assesses candidate responses, technical skills, and cultural fit, generating structured evaluation reports.
- Implemented advanced computer vision features, including MediaPipe face mesh detection, iris tracking, multiple face detection, head pose estimation, and real-time gaze direction monitoring for proctoring.
- Built full-stack infrastructure with Python (Flask), Next.js/React, real-time transcription, automated video/audio recording (OpenCV/FFmpeg), and cloud workflows on Azure Blob Storage.
- Developed an AI-powered interview and proctoring platform with real-time face detection, gaze tracking, and automated evaluation using MediaPipe, OpenCV, and LiveKit and python.
- Automated end-to-end interview and call-center pipelines, improving operational efficiency, reducing manual processes by 80%, and enhancing system reliability.

Avzdax Core

Jan 2025 - Nov 2025

Lead Computer Vision Engineer

Engineered and deployed a military and mission-critical AI powered security architecture designed for high-security environments, focusing on proactive threat detection, situational awareness, and automated incident response.

Key Responsibilities & Technical Contributions:

- **Weapon Detection:** Real-time identification of firearms, knives, and prohibited items and different types of weapons.
- **Advanced Person & Vehicle Tracking:** Implemented multi-person and multi-vehicle tracking systems across monitored areas, including zone transition logic.
- **Multi-Camera Object Re-Identification:** Architected cross-camera algorithms to maintain unique ID assignments for individuals or objects moving between different feeds.
- **Behavioral Analysis & Pose Estimation:** Built models to analyze body posture, identifying aggressive stances or threats in real-time.
- **Advanced Analytics:** Developed loitering and tailgating detection, crowd density monitoring, and heatmaps for operational trend analysis.
- **Face Recognition & Matching:** Developed secure pipelines for identifying individuals against databases, supporting access control, employee authentication, and blacklist monitoring.
- **Facial Emotion Recognition:** Integrated real-time analysis of stress, fear, or anger to identify potentially hostile actors.
- **License Plate Recognition (LPR/OCR):** Engineered localization and OCR models for automated vehicle identification and secure entry/exit logging.

MealLensAI

Jan 2025 - March 2026

Lead AI engineer

- Build and Deploy AI application for chronic conditions on Google Cloud
- **Strategic Growth & Stakeholder Management:** Translate complex AI/Computer Vision pipelines into clear value propositions, securing buy-in from stakeholders and early-adopter clients.
- **Business Operations & Process Mapping:** Identified critical gaps in health-tech workflows, architecting AI-driven automation strategies to improve clinical outcomes and operational efficiency.
- **Sales & Cross-Functional Alignment:** Partnered with internal teams to qualify leads, refine service offerings, and manage the full project lifecycle from initial discovery to delivery.
- Manage Google Cloud infrastructure
- Lead the full technical development of MealLensAI, an AI-powered food and health platform that provides recipe generation, chronic-condition diet recommendations, and AI-driven nutrition insights all with Python language.
- Use LLMs (OpenAI, Gemini, Vetex AI, etc.) and multimodal models to implement food recognition, ingredient parsing, dynamic meal plan creation, personalized nutrition models, and health-condition meal recommendation algorithms.
- Develop and deploy AI APIs powering mobile and web clients, ensuring scalable, low-latency performance for real-time recipe, meal plan, and health guidance generation.
- Architect the backend API using Flask, Docker, and cloud infrastructure (AWS/GCP/Render/etc.), handling, data pipelines, and the entire AI system.
- Design personalized health algorithms using user inputs (age, gender, weight, symptoms, health conditions, exercise level, goals) to generate safe meal recommendations and calculate metrics such as BMI and BMR.
- Implement secure B2B access for hospitals, pharmacies, nutritionists, gyms, and insurance companies, enabling them to manage patients, update health data, and monitor progress while preserving user privacy.
- Deploy and manage backend services in production, handling CI/CD, containerization, monitoring, error handling, and performance optimization.

Computer Vision Africa (AI community)

Founder & Community Lead

Jul 2023 - Present

Founded and lead Computer Vision Africa, an AI community focused on developing and nurturing AI talent across Africa, with a strong emphasis on computer vision and real-world problem solving.

- Design and deliver hands-on training programs, workshops, and collaborative projects that equip aspiring engineers with practical skills in Python, machine learning, and computer vision techniques.
- Build and manage AI-driven initiatives that encourage innovation, mentorship, and open collaboration, helping members transition from beginners to industry-ready practitioners.
- Foster partnerships and create opportunities for African developers to contribute to global AI advancements while solving local challenges using scalable AI solutions

- Host free bootcamps and sessions (teach AI from math up)
Slide: https://docs.google.com/presentation/d/1jf1sQ5Jp8x28HxdoaYmnUtLxx8Exgjsj9_2o3RDuJyg/edit?usp=sharing

DalensAI

Sep 2023 - Oct 2025

Lead Machine Learning/Computer Vision Engineer

- Developed AI models for livestock health monitoring, threat detection, and real-time tracking.
- Conducted code reviews and led a team in delivering quality AI solutions for agriculture.
- Enhanced operational efficiency with AI-powered security and monitoring systems all with the Python language.

Esdiac

Dec 2022 - Oct 2024

Lead Machine Learning/Computer Vision Engineer

- Write machine learning and computer vision code for, number plate detection, face detection, face recognition, fingerprint recognition, Gender recognition, Race and ethnicity recognition, face feature extraction for facial distance measurement all with Python language.
- Write APIs for machine learning and computer vision software Containerize the software using Docker and deploy it on the company server
- Worked side by side with colleagues to implement AI software on websites and mobile apps.

NMG Ventures

Jan 2024 - Jun 2024

LLM Engineer/AI Chatbot Developer

- Built and deployed a 24/7 conversational AI assistant for real estate companies, streamlining customer interactions.
- Designed LLM-powered workflows for property inquiries, scheduling, and personalized responses.
- Integrated the chatbot with Google Sheets to log user data for reporting and analytics automatically all with Python language.
- Provided maintenance, updates, and staff training, ensuring smooth operation and compliance with data privacy standards.
Key Achievement: Successfully automated customer care processes for real estate businesses, enabling 24/7 availability and reducing manual workload, while delivering a professional, responsive customer experience.

Pleuth Robotics

Apr 2024 - Oct 2024

Computer Vision Engineer

- Designed navigation and object detection systems for autonomous robots all with Python language.
- Developed pile detection AI software for automated construction site management.
- Design real-time pile detection and measurement AI software for site navigation and automated measurement of pile foundations by robots.

Guided Labs

Sep 2023 - Jan 2024

LLM Engineer/Computer Vision Engineer

- Designed and developed an LLM-powered chatbot for the hospitality industry, leveraging LLaMA, GPT, and Hugging Face models to enhance customer engagement and support all with Python language.

- Fine-tuned LLMs and applied advanced prompt engineering techniques to improve response accuracy and relevance for customer service needs.
- Created a TypeScript API to relay chatbot responses to staff for further actions, streamlining workflows.
- Built AI models for race, ethnicity, age, and gender recognition, as well as car model, brand, and year identification.
- Developed face detection and recognition systems with automatic face ID allocation for seamless identity management.
- **Key Achievement:** Delivered advanced AI-driven solutions that automated customer service and improved operational efficiency in hospitality.

DalifeAI

Jul 2023 - Dec 2023

Lead LLM/Machine Learning Engineer

- Developed machine learning and LLM-powered chatbot software for suicide prevention, leveraging GPT and LLaMA models to provide real-time support to at-risk individuals all with Python language.
- Applied advanced prompt engineering techniques to fine-tune LLMs for accuracy and relevance in sensitive scenarios.
- Reviewed machine learning code and facilitated meetings to improve collaboration and solution quality.

RheBox

Feb 2022 - Dec 2023

Machine Learning/Computer Vision Engineer | Nigeria

- Write machine learning and computer vision software for bone detection which helps customers detect if they have bone issues and send the report to a doctor all with Python language.
- Write API for the ML and computer vision software, containerize it, and deploy it. Worked side by side with colleagues and teams to solve problems.
- Researched, designed, and implemented machine learning and computer vision applications to calculate bone joint position and angles

BartCash

Aug 2022 - Sep 2023

Project Manager/Machine Learning Engineer

- Led a team to develop face recognition systems for e-commerce verification.
- Organized sprints and ensure timely project delivery, enhancing client satisfaction.

Payjaro

Jul 2022 - Nov 2022

Machine Learning and Computer Vision Engineer

- Write Machine learning and computer vision software for palm detection system for payment all with Python language.
- Worked side by side with colleagues and teams to implement the AI software.
- Researched, designed and implemented machine learning and computer vision applications to solve palm detection problems for payment

Jampay

Aug 2022 - Nov 2022

Machine Learning and Computer Vision Engineer

- Write machine learning and Computer vision software for face verification Building of a barcode detection system
- Worked side by side with colleagues and teams to solve problems.

Kodehauz

Oct 2018 - Dec 2022

AI Intern and Robotics Engineer

- Building AI and computer vision projects
- Building Robotics projects and also teaching them which increased the company's income by 30%
- Structure curricular syllables for Robotics
- Team lead in the development of the Kodehuaz robotics manual which increased the company's income by 20%

EDUCATION & CERTIFICATIONS

HERITAGE POLYTECHNIC – *Eket* | Dec 2023

National Diploma (ND), Electrical Engineering

CERTIFICATIONS

1st Prize Winner, Science Fair Competition - 2019 | 2nd Prize Winner, Science Fair Competition - 2021
